# BrochureRequest

## BrochureRequest

You don't need paper leaflets anymore. Visitors interested in brochures can view these on a screen and requests them directly. Let's users browse and select PDF files. Selected items can be requested via email, QR code, printed or copied to a USB drive. Collected form data is locally stored in an Excel file.

## Features

- PDF browser / viewer
- Request basket
- Email, QR code, print and USB drive functions
- Possibility to create different media categories
- Move, scale and rotate your media
- Customizable backgrounds

# MediaSwipe

## MediaSwipe app

With MediaSwipe you can create a presentation in no time to present a selection of images and videos to your audience. Navigate to your desired image or video by using a special swipe functionality, which is located at the bottom of the screen. The automatic swipe function makes it easy to show all your content in a loop.

## Features

- Full screen fit
- Navigation through a toggle thumbnail bar
- Secondary display support
- Automatically swipes back to the first image (loop)
- Easy to configure: drag and drop images in a folder
- Customize your background with color scheme
- Mouse mode or single touch available
- Play animation available

Tap the tiles for info

## MediaTiles app

Impress your visitors with a simple, yet powerful presentation made with MediaTiles. It's easy to create a presentation to present content such as photos, videos and PDF files. By tapping on a tile you will unlock extra information, and with a special 3D effect it will become visible on the back of the tile. This app is ideal for showing your products on a video wall or if you want to introduce staff members.

## Features

- Easy to configure: drag and drop files in a folder
- 3D effect for turning tiles
- Tiles can open a photo, video or PDF
- Vertical and horizontal sorting method for gallery
- Option to loop media while playing (videos)
- Several people can tap a tile at the same time
- Move, scale and rotate your media
- Customizable background

## Lilium

Lilium is a genus of herbaceous flowering plants growing from bulbs, all with large prominent flowers. Lilies are a group of flowering plants which are important in culture and literature in much of the world. Most species are native to the temperate northern hemisphere, though their range extends into the northern subtropics.

## Hibiscus

Hibiscus is a genus of flowering plants in the mallow family, Malvaceae. The genus is quite large, comprising several hundred species that are native to warm temperate, subtropical and tropical regions throughout the world. Member species are renowned for their large, showy flowers and those species are commonly known simply as "hibiscus".

## Tulip

Tulips (Tulipa) form a genus of spring-blooming perennial herbaceous bulbiferous geophytes (having bulbs as storage organs). The flowers are usually large, showy and brightly coloured, generally red, pink, yellow, or white (usually in warm colours).

## SwipeMediaMarker

With SwipeMediaMarker you can create amazing interactive experiences and impressive presentations that are mind blowing. Add touchable markers to open other applications, configurations or other content - with each its specific media and background images. You can swipe between each marker background. Each marker page has its own set of markers and can contain photos, videos and PDF files shown in an auto-generated menu. Also jumps between pages can be attached to a marker.

## Features

- Create as many pages as you want (unlimited)
- Unlimited access to Omnitapps apps
- Add as many markers as you like (unlimited)
- Marker positioning tool available
- Jumping between pages can be linked to markers
- Draw marker function: draw custom shaped transparent hit areas
- Animated marker options: make your markers more visible and let them automatically play as an animation
- Possibility to lock on a page or make them swipeable
- Auto-generated media menus
- Optionally display thumbnail menu for fast navigation
- Request basket (email, QR code, print and USB drive)
- Data stored in a local database

## Form app

With Form you can create your own interactive forms to collect data from your customers and visitors. Configure your own text field, drop-down list, radio-buttons and check box. After submitting the form, a configurable message is displayed. The data that is collected will be stored on your local computer in an Excel file. And if you want to email the data to another person, you can create a contact in the form with the email request CC function.

## Features

- Collect data with a form
- Email request CC function (when configured)
- Form data stored in a local database
- Store data in request server (when configured)
- Onscreen keyboard
- Customizable background and form fields
- Configurable radio buttons, check boxes and drop-down

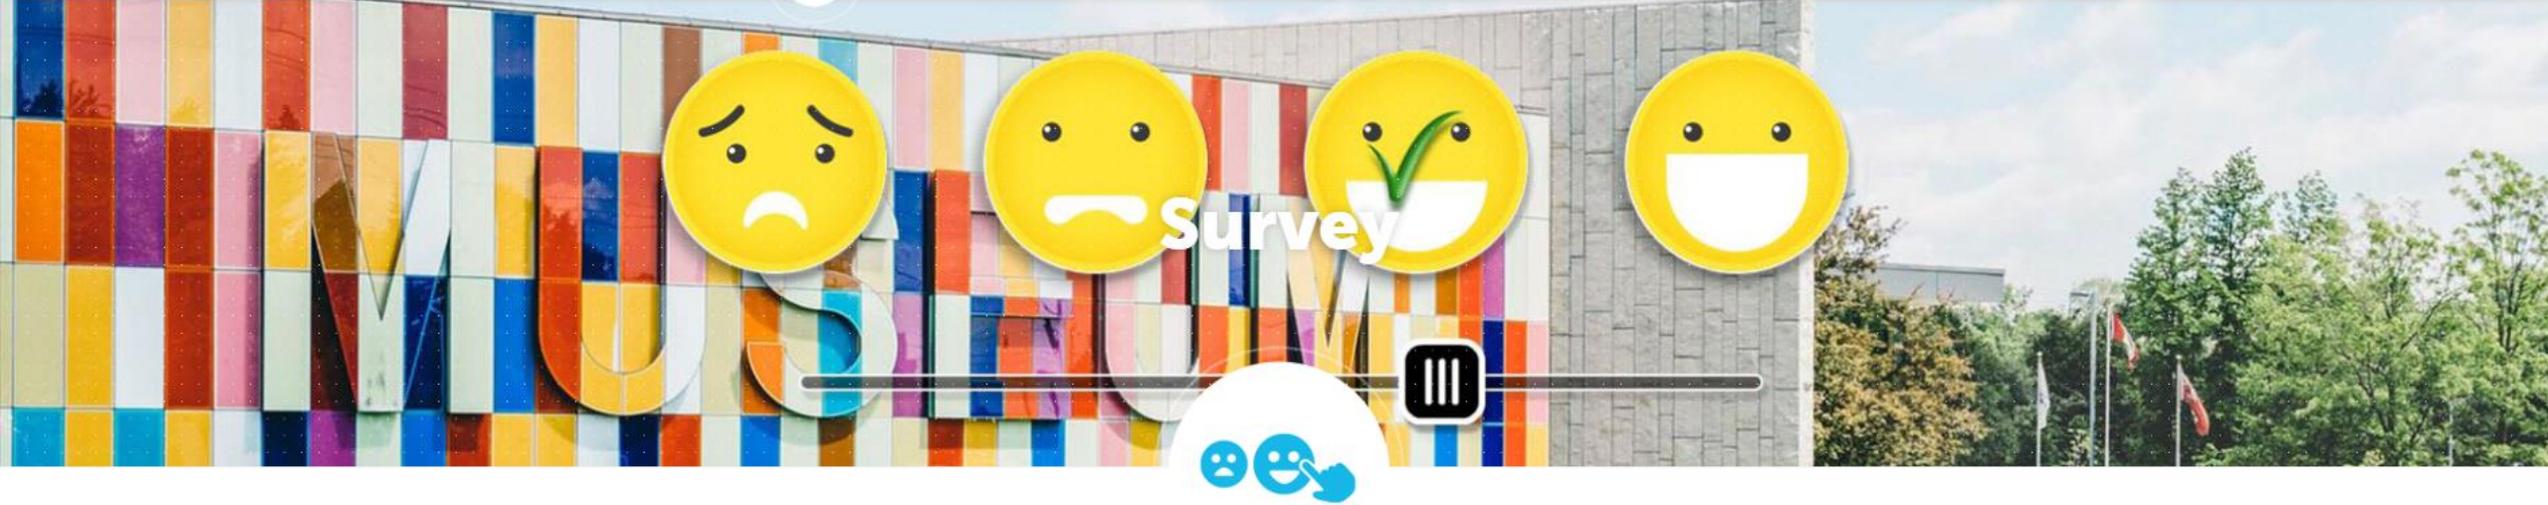

## ExternalApps

Execute your own applications on top of Omnitapps with ExternalApps. You can start your application directly from the Omnitapps main menu. While your application runs, Omnitapps will stay open in the background. If you close your application you will go back to the Omnitapps main menu. You can also make the composer close button visible on top of the external application.

## Features

- Run other application on top of Omnitapps
- Configure the link to your executable application (exe)
- Show the close button on top of the application to close it and return to Composer
- Send parameters to the external app to e.g. start a browser with a specific URL or start a text editor with your own document

## Survey app

With Survey you can easily create a survey for your customers. With one of the 8 different question templates you can create any kind of survey you like. All elements can be styled, background can be replaced and for each question you can add media. Data is stored locally and when configured is directly sent to the request server.

## Features

- Different question types, for single choice, multiple choice, scoring, ranking and information pages
- Optional custom navigation based on a given answer
- Requestable media item to a form, which can be sent via the request server for instant delivery
- Add media to a question for extra clarification
- Data stored in a local database
- Customizable background (photo and video)

### What is your main type of transportation?

If you choose car or motorcycle you'll get an extra question, if not you'll skip this question.

1/10

This screen features a background image of a paved road with yellow double lines curving through a forest. Six square buttons are arranged in two rows of three. The top row contains: a person walking on a beach, a white bicycle with yellow wheels, and a blue motorcycle. The bottom row contains: a red double-decker bus, a white and red high-speed train, and a dark grey car. A progress bar at the bottom shows 1/10 with a green indicator.

### Where does your energy come from?

You can choose multiple energy sources

Back

5/10

This screen features a background image of a large array of solar panels under a blue sky with white clouds. Three square buttons are arranged horizontally in the center. The first button shows solar panels and is labeled 'Solar energy'. The second button shows wind turbines and is labeled 'Wind energy'. The third button shows a dam with water flowing and is labeled 'Hydropower energy'. A 'Back' button is in the bottom left, and a progress bar at the bottom shows 5/10 with a green indicator.

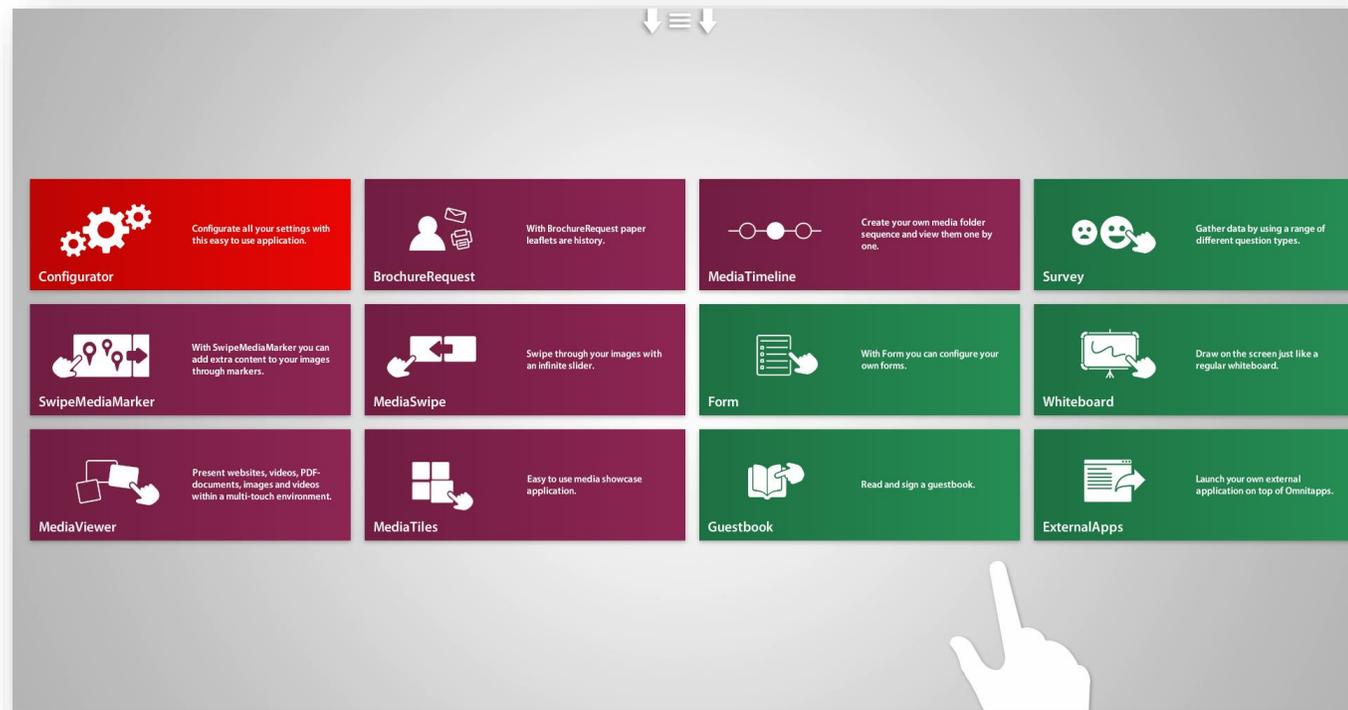

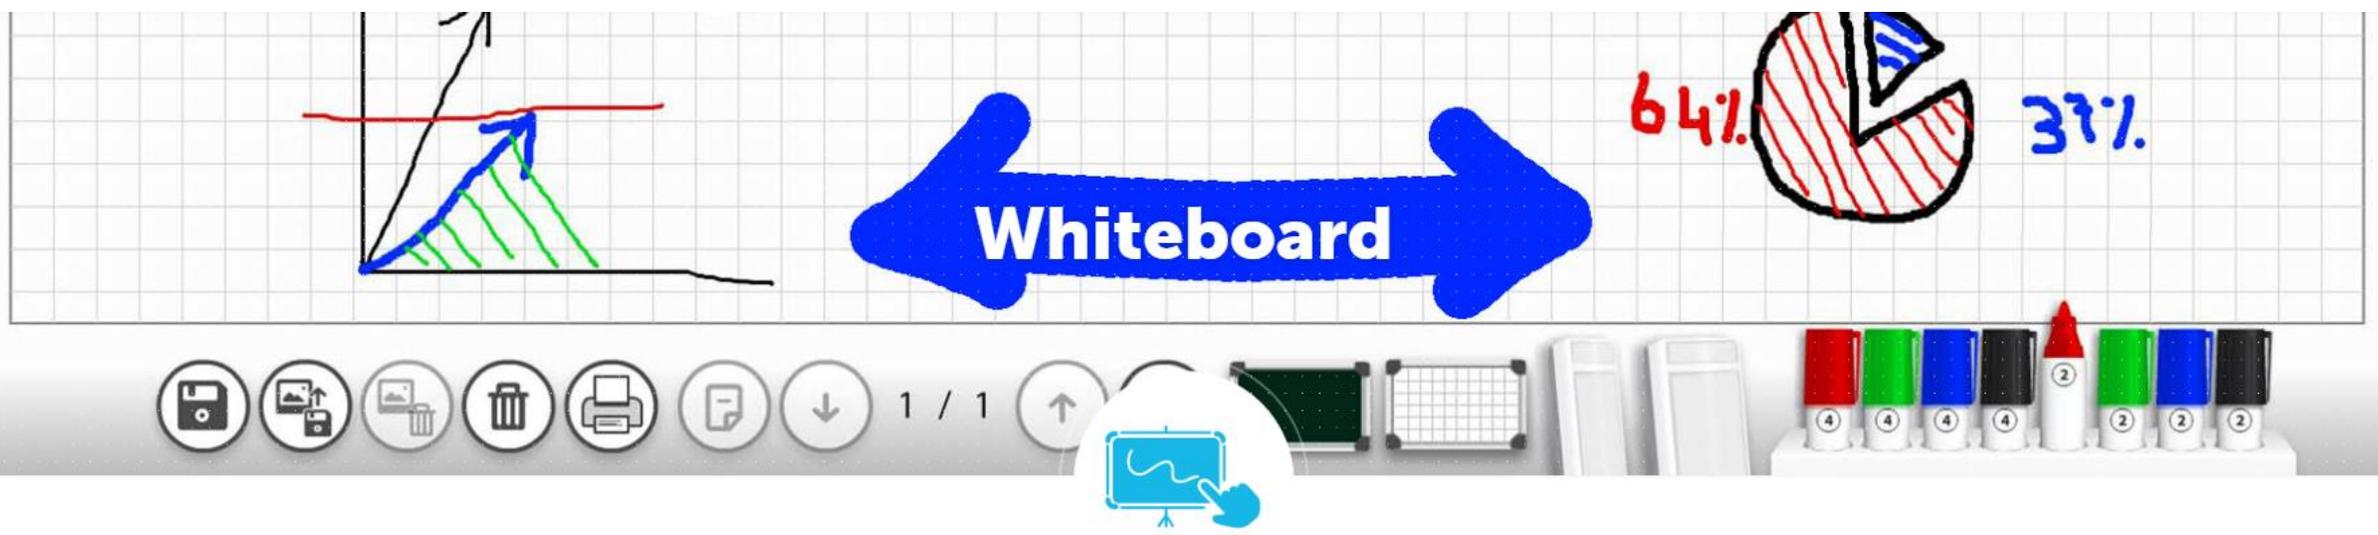

## OpenConfigApp

The OpenConfigApp allows you to open other configurations without closing the main configuration. Usually this app is used for interactive experiences with multiple languages. It's also possible to set a password, so only the people you want to give access can enter the configuration (which is opened by the OpenConfigApp).

## Features

- Opens other configurations without closing the main configuration
- Use multiple languages in one configuration
- Lock configurations with a password

## Whiteboard app

Whiteboard is an interactive whiteboard app. It's very user-friendly and has all the functionalities of a normal whiteboard with markers. With one touch you can choose the color and line thickness. It works easy as it should be.

## Features

- Import media and draw on it
- Choose position marker / pen / eraser
- Customizable background
- Option to print whiteboard
- Multiple pages to draw on

# VideoPlayer

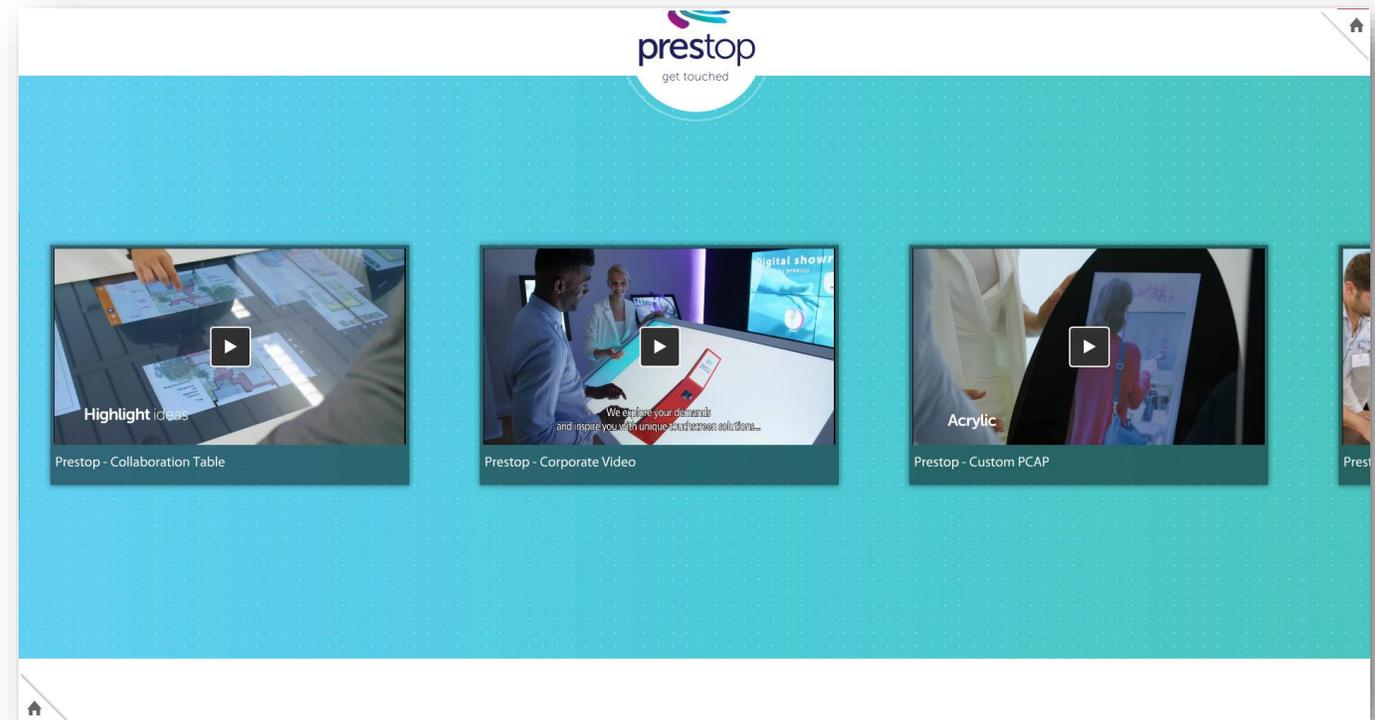

## VideoPlayer app

With VideoPlayer you can present your videos in a user-friendly interface and allow users to choose easily which video they want to start from an auto-generated thumbnail menu. The selected video will play in full screen mode.

## Features

- Video browser / viewer
- Select and play videos in full screen
- Intuitive playback controls
- Overview for easy selecting the video for playback
- Customizable background

## DrawOnVideo app

If you want to show videos and make recommendations and emphasize actions at the same time, then DrawOnVideo is the perfect app for you. With this easy to use presentation tool you can highlight and draw interesting points on a video and when it's complete you can save the video position.

## Features

- Video browser / viewer
- Drawing tools
- Move, scale and rotate videos
- Customizable background and preloader
- Recall saved video positions to compare situations (e.g. before / after)

# PuzzleGame

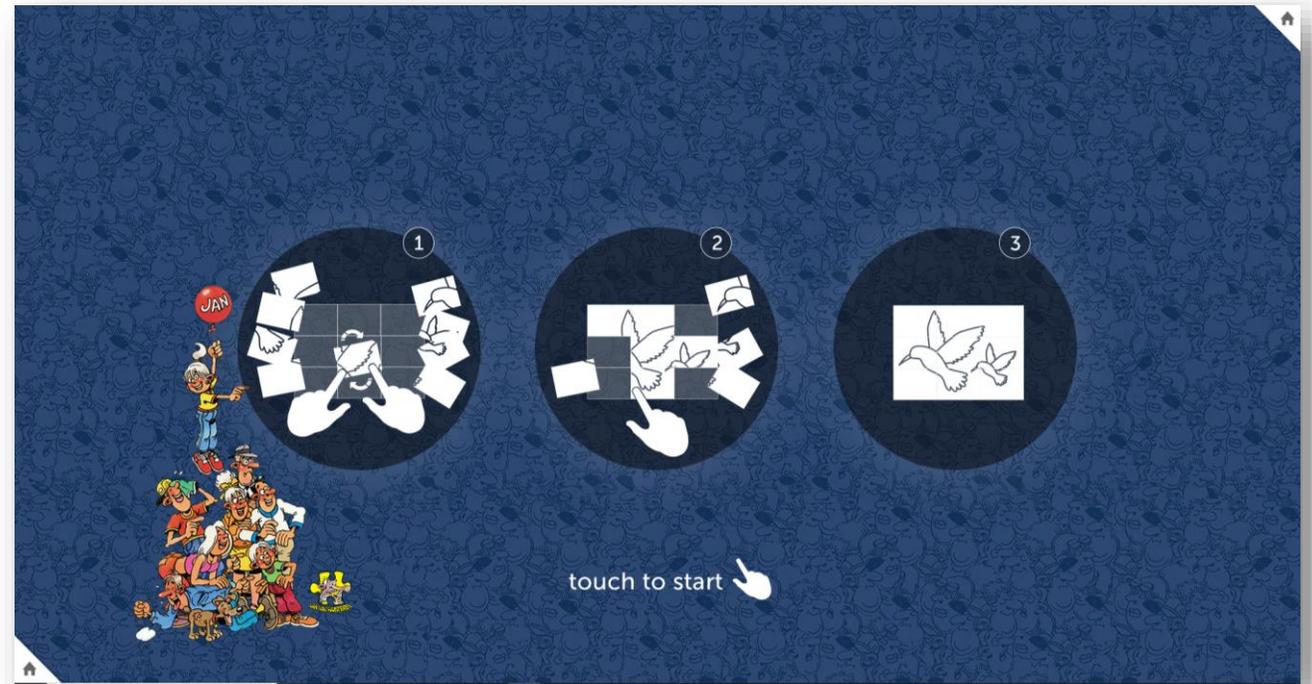

## PuzzleGame app

Entertain your visitors with your own created puzzle! With PuzzleGame it's a piece of cake to create your own puzzle, just pick an image and size and the app will automatically generate a puzzle. The puzzle can be solved by dragging and rotating the puzzle pieces into place. Via a form you can collect data, which will be stored locally in a database.

## Features

- Easy to configure: drag and drop images in a folder
- Automatically generated puzzle pieces
- Multiplayer game for 1 or 2 players
- Customizable puzzles and backgrounds
- Form data stored in a local database
- Redesigned graphics

## MemoGame app

With MemoGame you can create your own interactive memory game. This is a competitive multiplayer game for 1 or 2 players. All you need to do is match up images. With several options you can customize the cards, backgrounds, sounds and other elements of the game. Via a form you can collect data, stored locally in a database.

### Features

- Multiplayer game for 1 or 2 players
- Customizable cards and backgrounds
- Form data stored in a local database
- High score registration
- 3D effect for turning cards
- Redesigned graphics
- Extra sound options

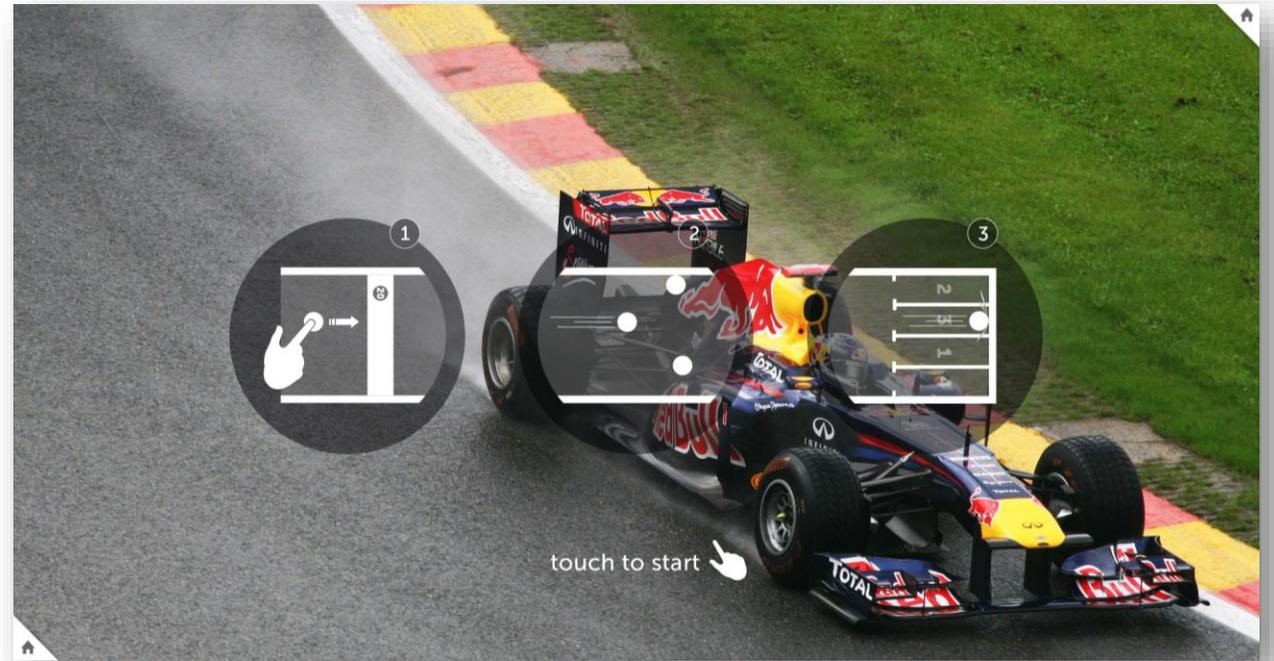

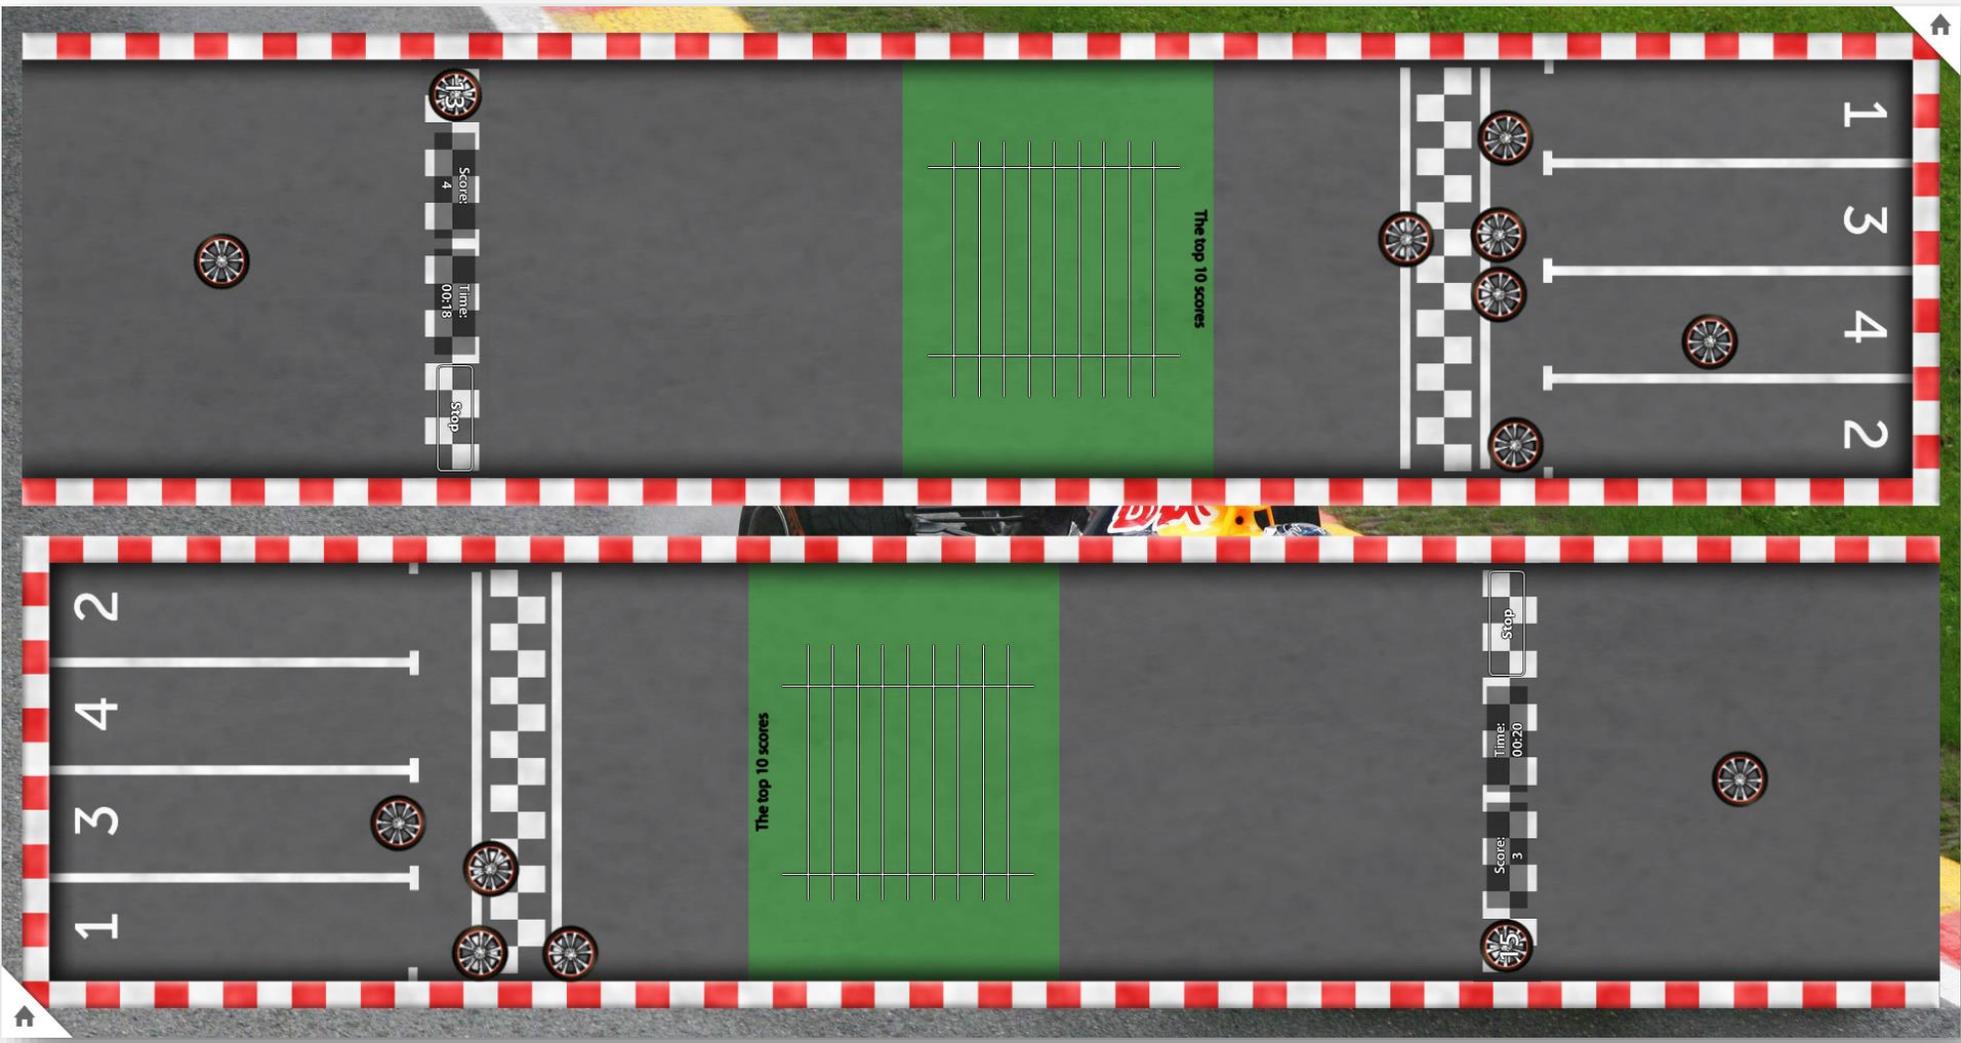

## ShuffleGame app

Challenge your visitors with this fun multiplayer shuffle game. This game can be played with 1 or 2 players. It's easy to change the elements and customize the game by yourself. Via a form you can collect data, which will be stored locally in a database.

## Features

- Customizable shuffle board elements
- Multiplayer game for 1 or 2 players
- Data stored in a local database
- Redesigned graphics

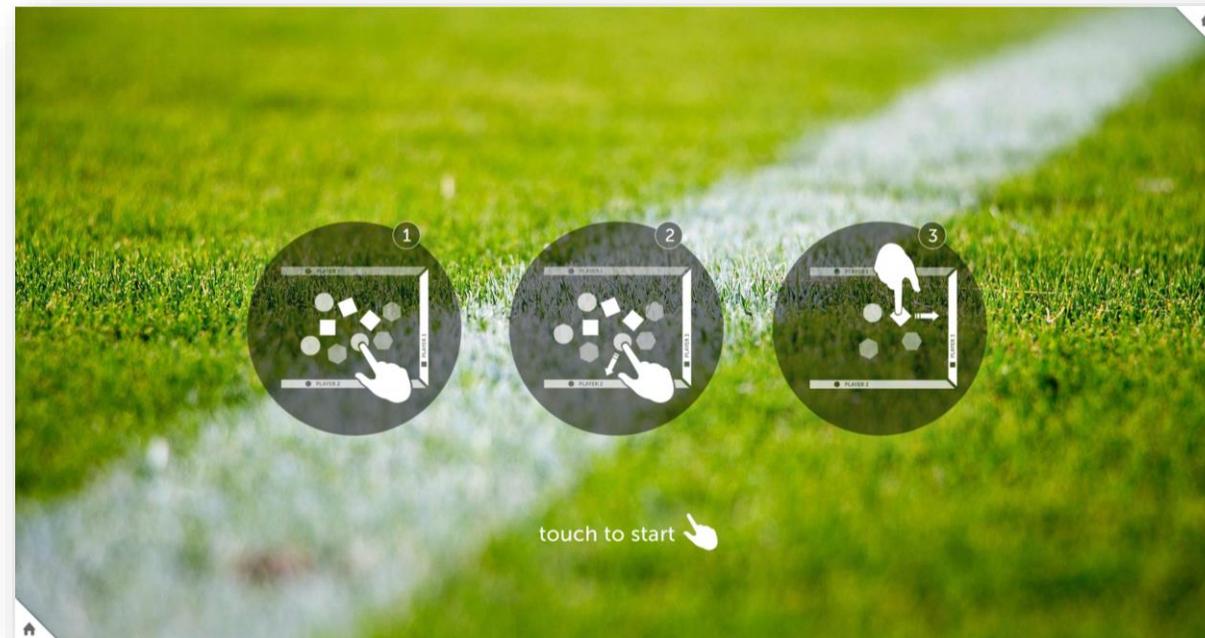

## MatchGame app

Put your own content in the spotlight with MatchGame. This competitive multiplayer game can be played with 1, 2 or 4 players. This game has been created so it's easy to fill with your own pictures. You can create your own categories and choose the content you want to show. To win the game you have to match the correct images to the correct category by dragging and dropping.

## Features

- Easy to configure: drag and drop images in a folder
- Multiplayer game for 1, 2 or 4 players
- Customizable categories
- Redesigned graphics

PLAYER 1

basketball 2 / 3

1 / 3 hockey

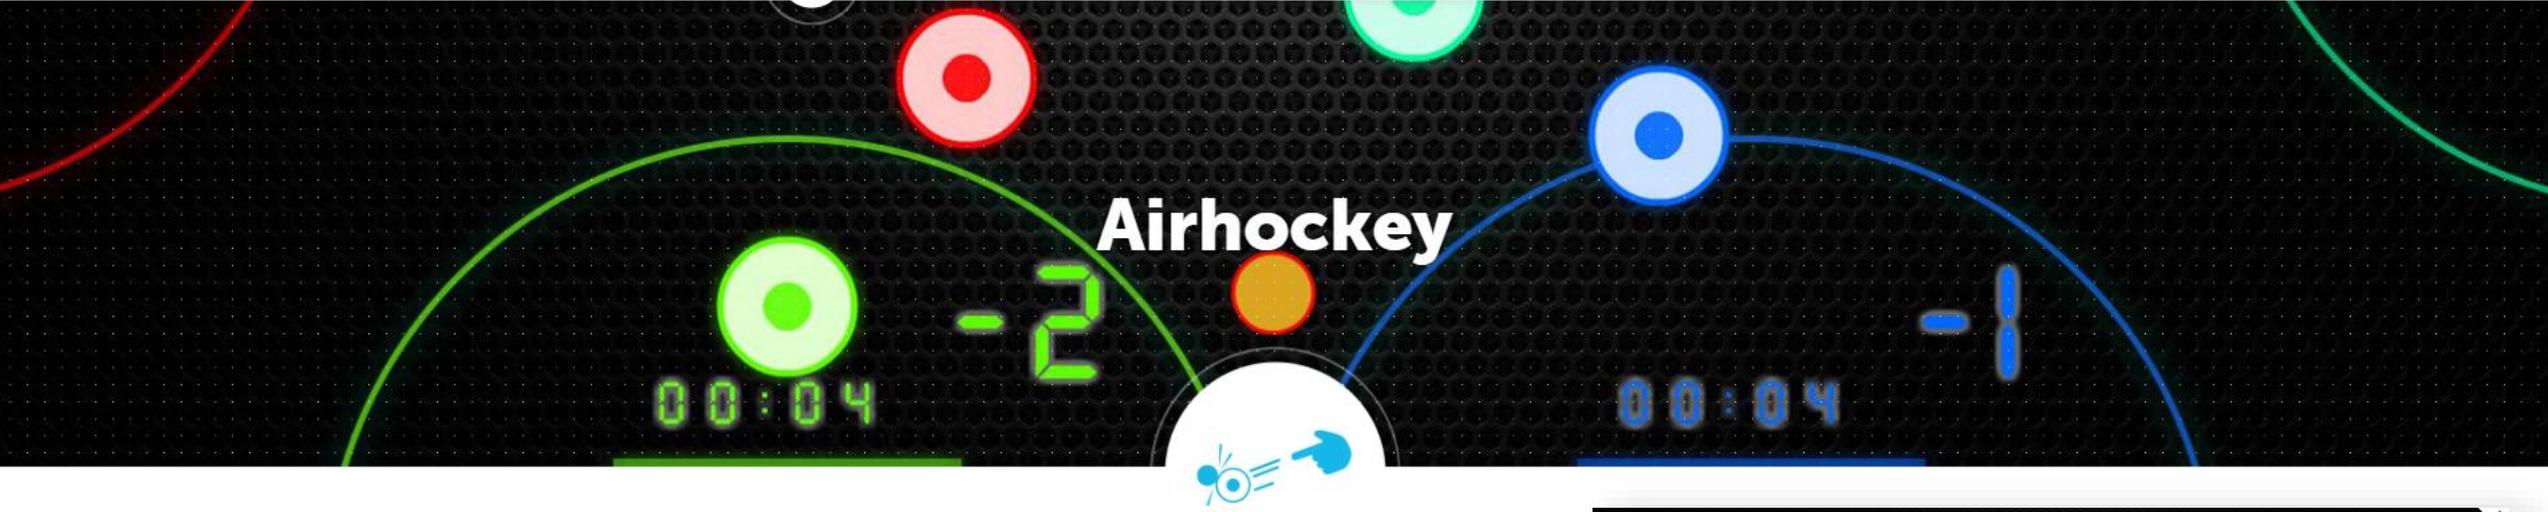

PLAYER 2

tennis 2 / 3

A collection of sports equipment including hockey sticks, pucks, and a hockey helmet. A collection of basketballs, including a Mikasa basketball. A collection of tennis rackets and tennis balls.

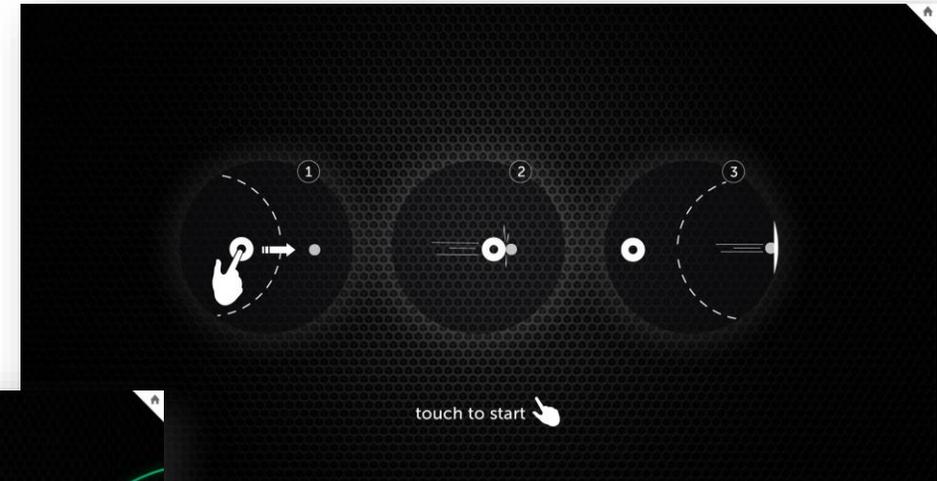

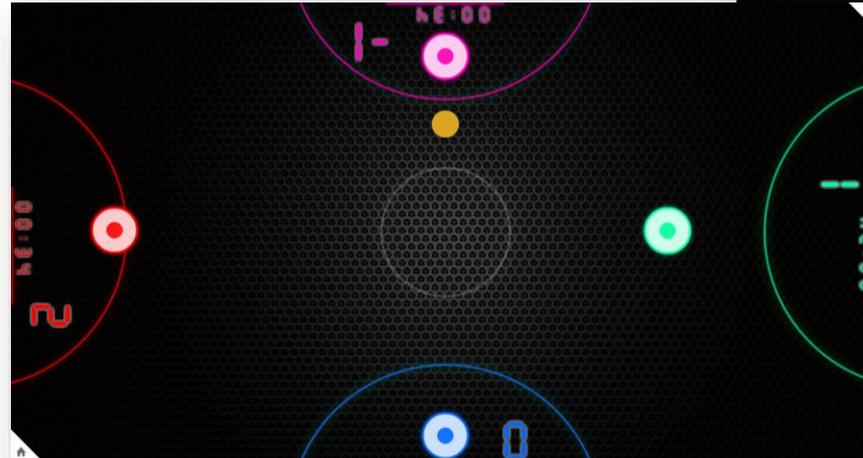

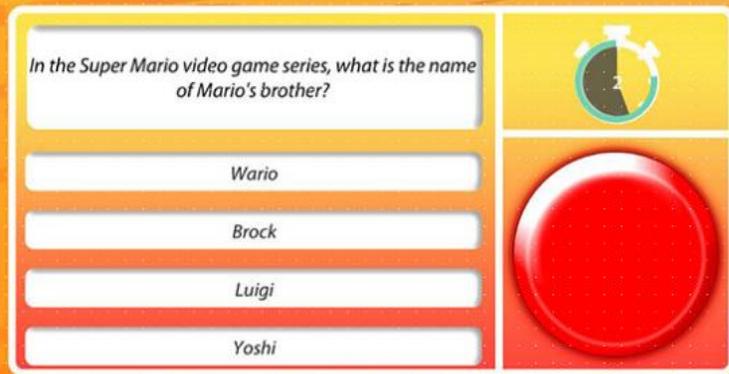

## Airhockey app

Challenge your visitors with Airhockey. This game can be played with 2-6 players who can compete against each other at the same time. With several options you can customize the airhockey game to your style using your own design.

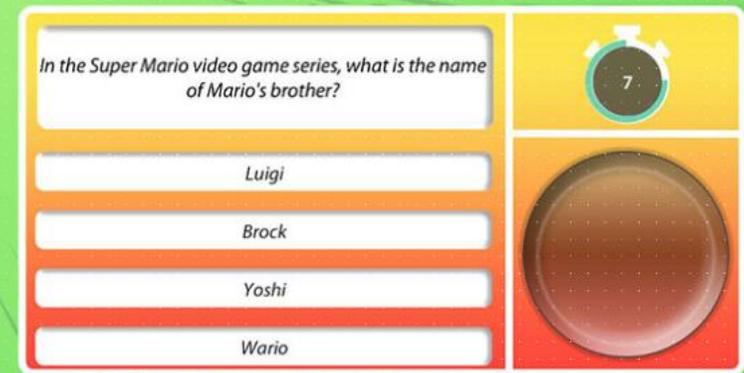

### Features

- Multiplayer game for 2-6 players
- Customize your own airhockey board elements by changing graphics

# BattleQuiz

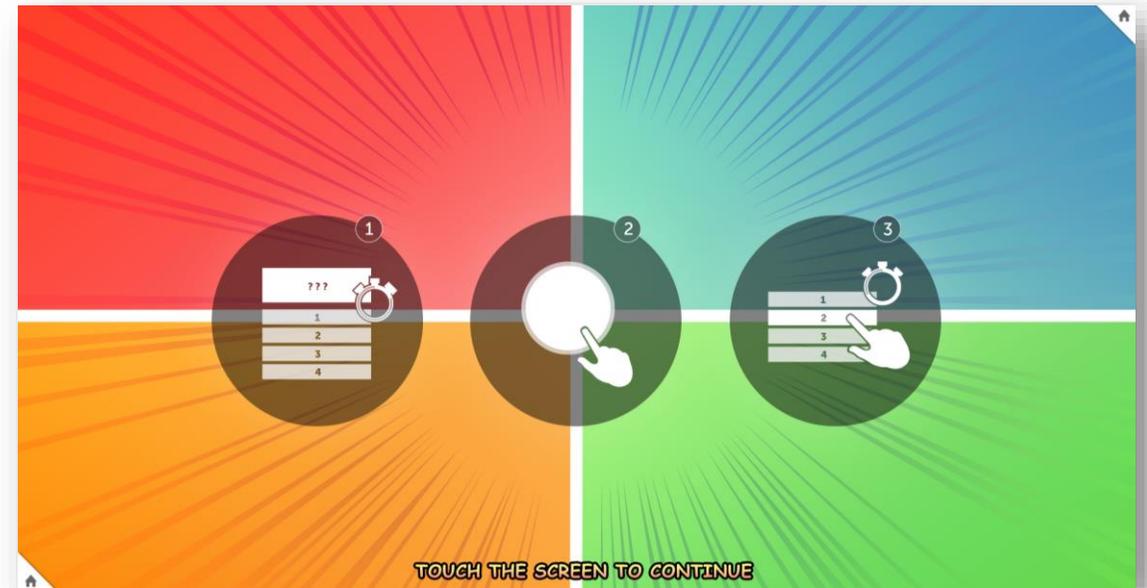

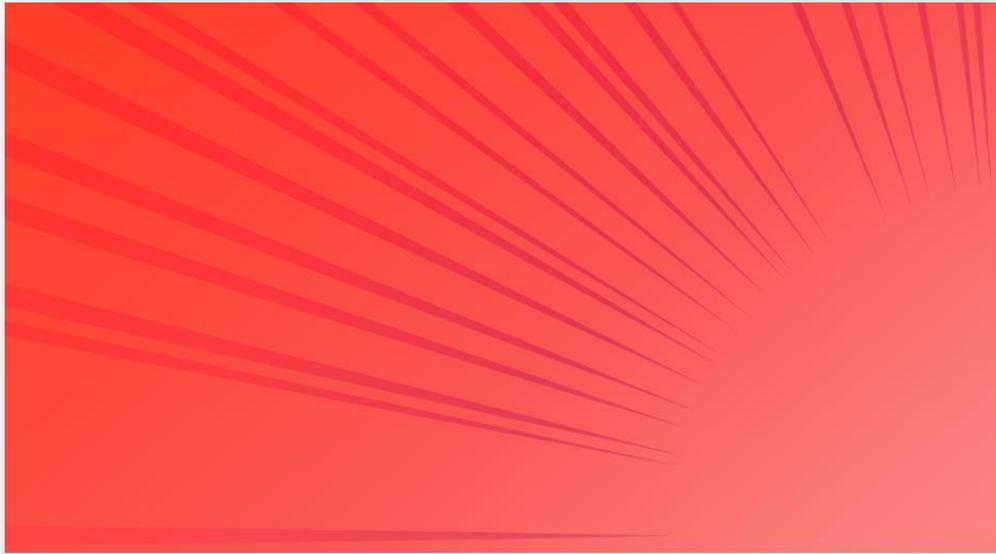

## BattleQuiz app

Get competitive with BattleQuiz. This fast-paced multiplayer game can be played with 2-4 players. Let visitors answer questions about your products and services or about specific topics. The questions will appear randomly in the BattleQuiz. At the end of the quiz you can see who has won and who lost. The last screen will present the best players with their high scores.

## Features

- Multiplayer game for 2-4 players
- Smooth and addictive gameplay
- Customizable questions
- Questions appear randomly
- High score registration
- Redesigned graphics

## QuizGame app

With QuizGame you can create your interactive multiple choice quiz with your own media. This way you can test knowledge of visitors and let them learn something at the same time. Every question can have a photo or video that users need to scale and rotate with multi-touch gestures to find the correct answer. You can show an explanation screen after a question has been answered. Let visitors play the game and collect form data information, which is stored locally in a database.

## Features

- Easy to configure: drag and drop images in a folder
- Explanation screen after each question available
- Answer timer can be set per second
- Randomly pick a x-number of questions
- Customizable backgrounds
- Data stored in a local database
- Fun multi-touch quiz elements
- Redesigned graphics

# Scratchpad

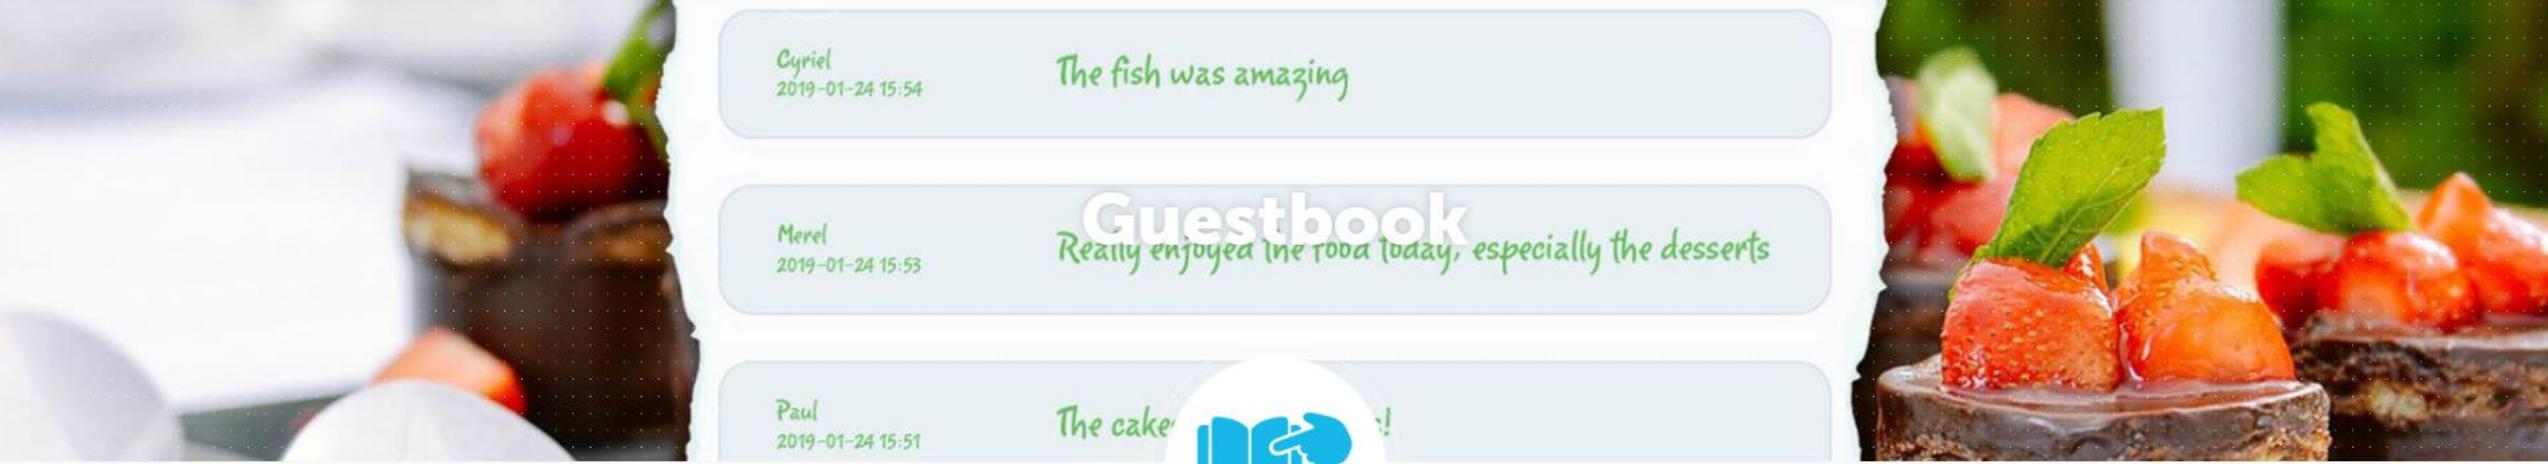

## Scratchpad app

ScratchPad is an interactive whiteboard software. This application is very user-friendly and has all the functionalities of a normal whiteboard with markers. With one touch you can choose the color and line thickness.

## Features

- Draw on it
- Choose position of marker/pen/eraser
- Choose background
- Redesigned backgrounds
- Print ScratchPad drawing

## Guestbook app

Offer visitors the option to leave a note or review in your guestbook. People can enter their message about their stay in your hotel or company. Nicely sorted by time and editable for the administrator. With the profanity filter (swear filter) you can add words that are not allowed and are offensive to others.

## Features

- Get reviews / notes from visitors
- Messages sorted by time
- Editable for administrator
- Profanity filter
- Configurable form fields
- Customizable interface settings
